

Design Patterns Intro

Ajith de Silva @epita.fr | 2026

Design Patterns :: Why ??

Solving same type problem by many are being done in different approaches

Way of describing is subjective based on the knowledge. (**NEEDS MORE TIME**)

..... may leads to high misleading

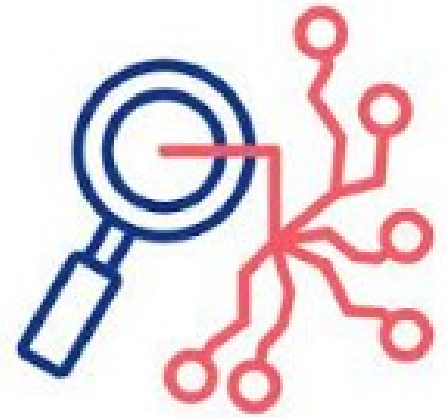

Difficulty of understanding is HIGHER (**NEEDS MORE EFFORT + TIME**)

Modifications/Maintenance cost is HIGH (**TIME + MONEY**)

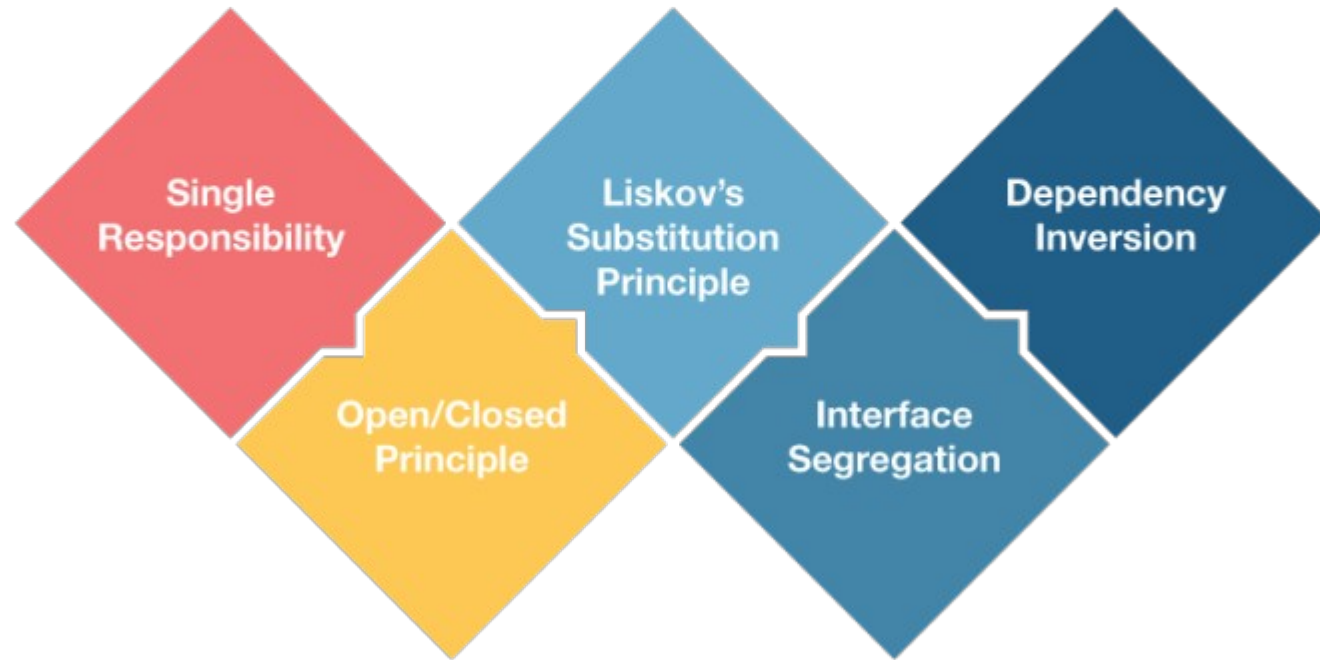

Change per problem/solution * Implementer. **HIGH COMPLEXITY (N * N)**

..... when solution is bigger, complexity increases

SOLID Principle

S.O.L.I.D.

SOLID Principle -- more

Single Responsibility Principle (SRP)

Open/Close Principle (OCP)

** Property ??
An attribute of a variable

Liskov Substitution Principle (LSP)

Dependency Inversion Principle (DIP)
